## Appendix 3: Process Innovation techniques **Table 1:** 7Rs of Process Innovation

	e 1: 7Rs of Process Innovation ristic (the "R")/Question	Apply When		
1	Rethink	Always		
1	Retillik	Aiways		
2	Reconfigure			
	How can this activity be	they are low-value or waste activities		
	eliminated?	<ul> <li>processes have a low value density</li> </ul>		
		<ul> <li>value received from activity is minimal (e.g.,</li> </ul>		
		approving small amounts)		
	How can common activities be	common activities are performed in multiple		
	consolidated?	locations		
		<ul> <li>common activities are performed inconsistently</li> </ul>		
		• there are economies of scale (e.g., shared services)		
	How can reconciliation be reduced	<ul> <li>a lot of time is spent reconciling paperwork and</li> </ul>		
	by putting quality at the source?	correcting errors		
		there is little accountability for errors		
	How can information sharing with	<ul> <li>demand is uncertain or unpredictable</li> </ul>		
	partners and customers improve	<ul> <li>stock-outs are frequent</li> </ul>		
	the process?	inventories are excessive		
	How can intermediaries and non-	<ul> <li>intermediaries add no value, and just relay goods,</li> </ul>		
	value added work be eliminated?	services		
	How can best practices from other	<ul> <li>you are looking for new ideas (i.e., always)</li> </ul>		
	industries be borrowed and			
3	improved upon?			
3	Resequence How can predicting increase	accurate information on customer demand is		
	efficiency?	available early		
	cinciency.	<ul> <li>forecasting models have proved reliable</li> </ul>		
		<ul> <li>time compression is more critical than accuracy or</li> </ul>		
		inventory costs		
		<ul> <li>product or service variations are relatively low</li> </ul>		
	How can postponement increase	customers want customized products or services		
	flexibility?	<ul> <li>inventory carrying costs are too high</li> </ul>		
		<ul> <li>forecasting models have proved inaccurate</li> </ul>		
	How can parallelism reduce time?	there are limited timing dependencies between		
		activities		
		• time compression is critical		
		• rework is necessary due to late error detection		
	How can the number of	where there are bottlenecks, large queues, or		
	interconnections and	frequent handoffs		
	dependencies be minimized?			
4	Relocate			
	How can the activity be moved	distance from the customer or supplier has		
	closer to the customer or partner	introduced delay, miscommunication, or error		

	1		
	to improve effectiveness?	•	customer convenience is critical customer volume is large enough and transportation lead times or costs are high
	How can the activity be moved closer to related activities to improve communication?	•	activities require a high level of teamwork or collaboration rework and errors are hard to trace back to the source
	How can we decrease cycle time by reducing travel time and distance?	•	travel is a significant proportion of the process goods are shipped multiple times (from plant to warehouse to customer)
	How can geographically virtual organizations be created?	•	resources are geographically dispersed, but don't need to be physically nearby to produce an outcome groupware technologies can be leveraged effectively costs of doing business may be lower in a different geographical area (e.g., moving call centers to remote areas)
5	Reduce		
	How can the frequency of the activity be reduced or increased?	•	an activity is non-value added but necessary there is low variation in the process or product there is high variability and low setup costs and times (e.g., small lot sizes)
	How would more information enable greater effectiveness?	•	higher accuracy is needed greater segmentation would yield greater marketing effectiveness
	How would less information or fewer controls simplify and improve efficiency?	•	a high proportion of costs goes to data collection or controls the value received from information or controls is minimal absolute accuracy is not necessary
	How can critical resources be used more effectively?	•	utilization of key resources is low critical resources are performing non-value-added or waste work
6	Reassign		
	How can existing activities and decisions be moved to a different organization?	•	another organization has skills or resources you lack you want different branding it is too difficult to change previous operating model or culture
	How can the activity be outsourced?	•	you don't perform the activity at world-class levels it is neither a core competency, not is it critical another organization performs this activity at world-class levels you have limited resources and want to focus on core

			_
			competencies
	How can the customer perform this	•	customers want to be empowered to help
	activity?		themselves (self-serve)
		•	certain customer segments are not profitable
		•	costs need to be reduced
	How can the organization perform	•	the customer wants more value and/or
	an activity that the customer is		convenience
	already performing?	•	the organization wants to get closer to the
			customer
	How can cross-training integrate	•	multiple tasks are needed to produce an outcome
	and compress tasks?	•	processes are not complex enough to justify a
			specialist
		•	only 20% of cases or less require special expertise
	How can suppliers/partners	•	the supplier or partner has skills, assets or
	perform this activity?		economies of scale that you lack
	,	•	the activity is not a core competency
		•	the activity is in an area of the business that may
			change rapidly in the future, and you need added
			flexibility
7			
7	Retool		
/		•	You want to make time, location, or performer
/	Retool  How can technology transform the process?	•	You want to make time, location, or performer irrelevant
	How can technology transform the	•	irrelevant
	How can technology transform the process?		•
	How can technology transform the process?  How can the activity be		irrelevant the current process is paper-based or manual and cannot be eliminated
	How can technology transform the process?  How can the activity be	•	irrelevant  the current process is paper-based or manual and cannot be eliminated the activity suffer from errors, inconsistency, or
	How can technology transform the process?  How can the activity be	•	irrelevant the current process is paper-based or manual and cannot be eliminated
	How can technology transform the process?  How can the activity be	•	irrelevant  the current process is paper-based or manual and cannot be eliminated the activity suffer from errors, inconsistency, or reconciliation problems greater transaction volumes are needed
	How can technology transform the process?  How can the activity be automated?  How can assets or competencies be	•	irrelevant the current process is paper-based or manual and cannot be eliminated the activity suffer from errors, inconsistency, or reconciliation problems greater transaction volumes are needed you have world-class competencies
	How can technology transform the process?  How can the activity be automated?	•	irrelevant  the current process is paper-based or manual and cannot be eliminated the activity suffer from errors, inconsistency, or reconciliation problems greater transaction volumes are needed
	How can technology transform the process?  How can the activity be automated?  How can assets or competencies be leveraged to create competitive advantage?	•	irrelevant  the current process is paper-based or manual and cannot be eliminated the activity suffer from errors, inconsistency, or reconciliation problems greater transaction volumes are needed you have world-class competencies growth potential in the existing business looks bleak
	How can technology transform the process?  How can the activity be automated?  How can assets or competencies be leveraged to create competitive advantage?  How can up-skilling, down-skilling	•	irrelevant  the current process is paper-based or manual and cannot be eliminated the activity suffer from errors, inconsistency, or reconciliation problems greater transaction volumes are needed you have world-class competencies growth potential in the existing business looks bleak customer satisfaction is low (up-skilling)
	How can technology transform the process?  How can the activity be automated?  How can assets or competencies be leveraged to create competitive advantage?  How can up-skilling, down-skilling or multi-skilling improve the	•	irrelevant  the current process is paper-based or manual and cannot be eliminated the activity suffer from errors, inconsistency, or reconciliation problems greater transaction volumes are needed you have world-class competencies growth potential in the existing business looks bleak customer satisfaction is low (up-skilling) multiple specialists are needed to produce an
	How can technology transform the process?  How can the activity be automated?  How can assets or competencies be leveraged to create competitive advantage?  How can up-skilling, down-skilling	•	the current process is paper-based or manual and cannot be eliminated the activity suffer from errors, inconsistency, or reconciliation problems greater transaction volumes are needed you have world-class competencies growth potential in the existing business looks bleak customer satisfaction is low (up-skilling) multiple specialists are needed to produce an outcome (multi-skilling)
